Market review & outlook

A Rough Start to 2022

- High inflation, an increasingly hawkish Federal Reserve and economic uncertainty have weighed on markets. Global equities reached bear market territory with the MSCI ACWI Index down 20% year-to-date through June.
- The simultaneous decline in bonds has made this year particularly painful for balanced portfolios. The Bloomberg Aggregate Bond Index was down 10% year-to-date through June, leaving a 60/40 portfolio down 16%.
- Longer duration bond portfolios often favored by defined benefit plans are down around 20% year-to-date through June¹, although the silver lining for defined benefit plans is that funded status has generally held up well as a result of declining liability values.

¹ Source: Bloomberg Long Government/Credit Index

Outlook - Uncertainty Abounds

- Market behavior this year appears to be a mostly rational response to the increase in longer-term interest rates, along with the rise in economic uncertainty from inflationary pressures, Ukraine-Russia conflict, Chinese lockdowns and policy tightening.
- Our base case view is that the monetary policy response priced by markets should curb inflation with only an economic slowdown or a mild recession. However, the risk of downside scenarios has increased.
- Should Fed tightening prove too much for the heavily-indebted US economy to bear, inflationary fears could give way to fears of a deeper recession. However, interest rates could decline in this scenario, providing some cushion to balanced portfolios.
- A more worrisome outcome is that inflationary pressures stay high even as economic growth slows, requiring the Fed to respond even more forcefully. We expect this would be negative for stocks and bonds.

Portfolio Actions

- While we are not excessively bullish, we do believe that the headwind from among other things, tightening monetary policy (in response to elevated inflation), and supply chain disruption are resulting in more attractive valuations.
- We continue to suggest investors follow rebalancing policies. Defined benefit plans on a de-risking glide path should stick with established interest rate hedge ratios and funded policy triggers.
- Clients should assess short-term liquidity needs and consider how best to meet those, should the environment worsen.
- It is our belief that the winds of deglobalization are blowing. This in turn will lead to some interesting investment themes, some of which we will be discussing at the next webinar on 8/10/22.

Economic fundamentals

Growth outlook increasingly uncertain

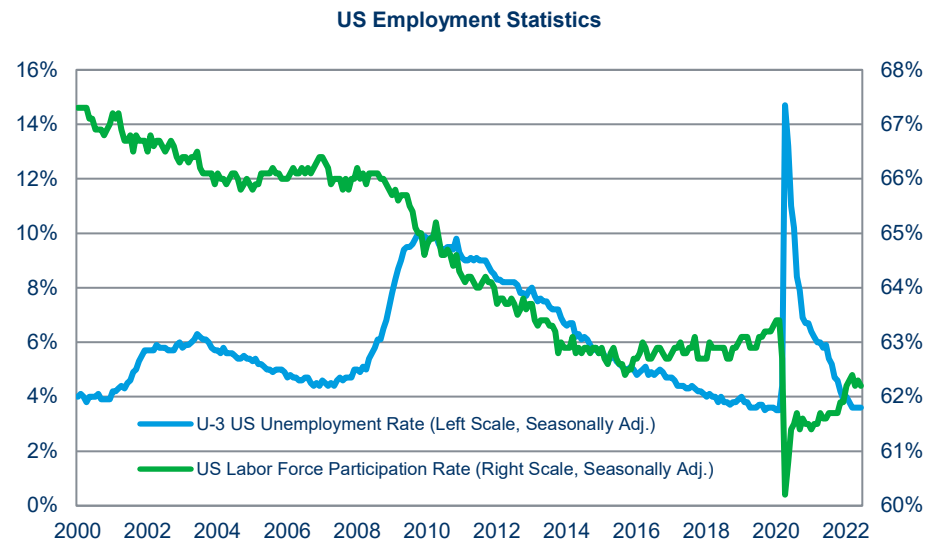

- The growth outlook has become more uncertain as persistent inflation has pushed central banks to tighten more aggressively. Consensus growth forecasts have moved lower for both 2022 and 2023.
- Manufacturing PMIs barely remain in expansionary territory for most developed markets now, having trended downward in 2022. China's PMI has rebounded as COVID restrictions eased in Q2.
- While downside risks have increased, the labor market continues to show strength. The US unemployment rate (U-3)¹ has fallen to 3.6% after peaking at 14.7% in April 2020. The labor force participation rate remains roughly one percentage point below its pre-COVID level.

Source: Bloomberg; as of 6/30/22

Source: Bloomberg; as of 7/11/22

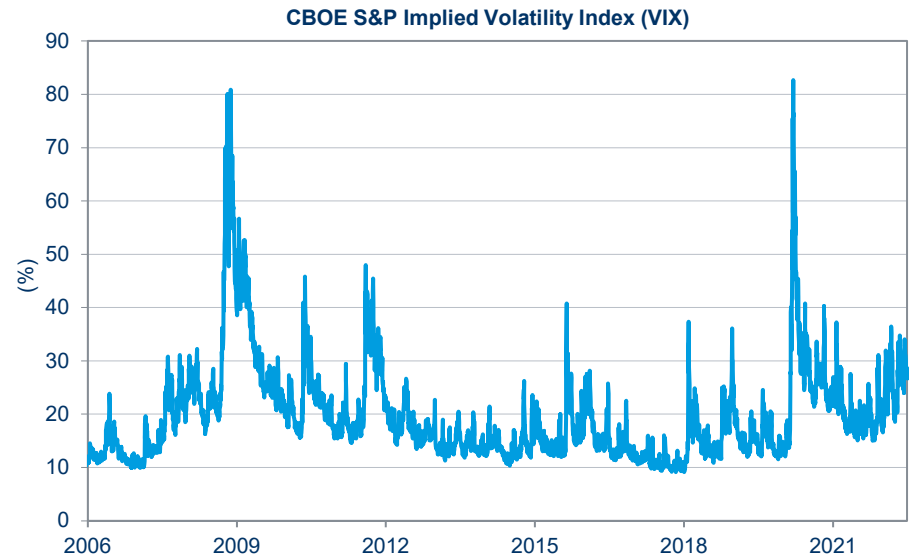

Source: Bureau of Labor Statistics; as of 6/30/22

¹ The U-3 unemployment rate represents the percentage of the civilian labor force that is jobless and actively seeking employment.

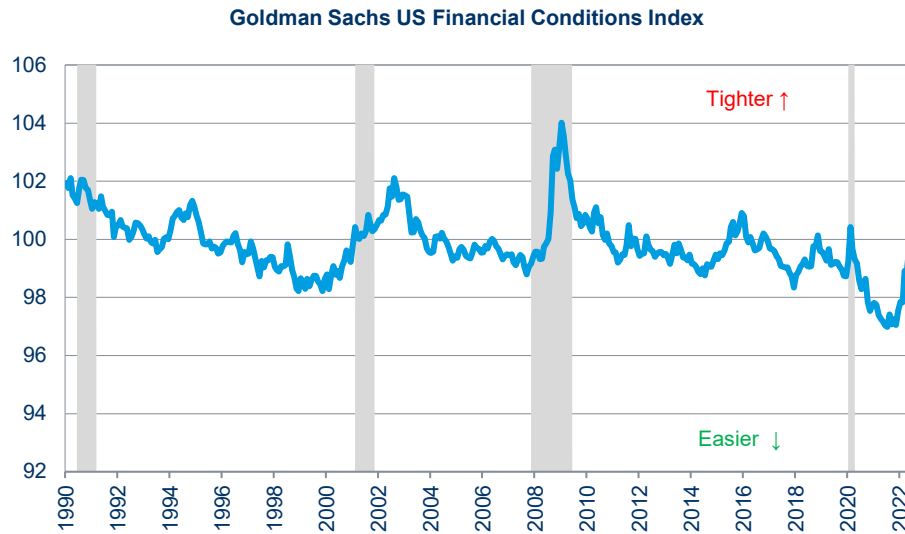

Risk factors

US inflation remains high

- US inflation continued to move higher in Q2, and the Fed has responded with an accelerated pace of tightening. It remains to be seen whether the Fed's actions can slow inflation without causing a recession.
- The Russian invasion of Ukraine continues to cause commodity supply disruptions and economic uncertainty, adding to the challenges central bankers face.
- The VIX volatility index rose from 21 to 29 during the quarter. It peaked at nearly 35 in mid-June.
- Financial conditions continued to tighten during the quarter as rates rose. The Goldman Sachs US Financial Conditions Index is near its pre-COVID levels.

Regional equity returns

Global equities decline amid monetary tightening

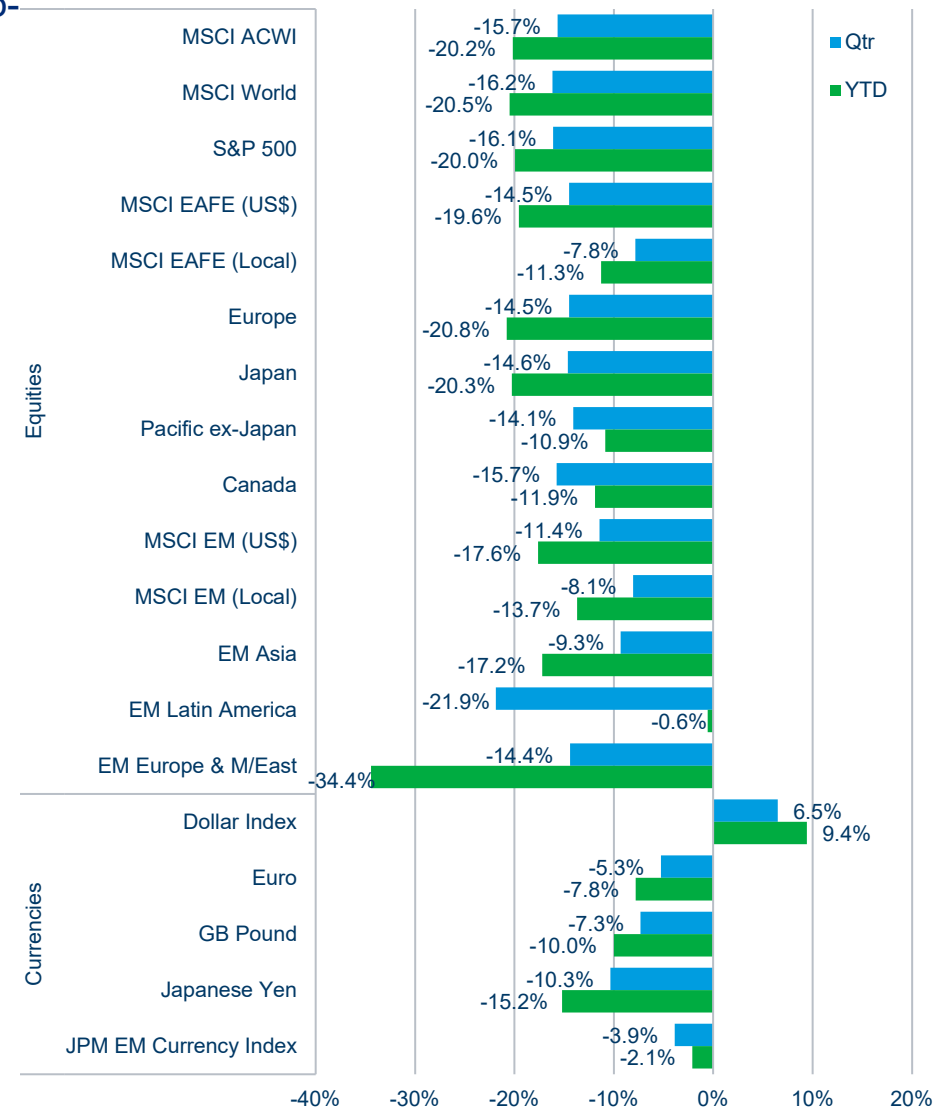

- Global equities posted steep declines in Q2, with the MSCI ACWI index falling 15.7% for the quarter. Year-to-date, the index has declined 20.2%.
- The S&P 500 fell 16.1% during the quarter, and is now down 20.0% year-to-date.
- International developed stocks declined 14.5% in Q2, leaving its year-to-date decline at 19.6%. A stronger dollar detracted 670 bps from US\$ returns during the quarter.
- Emerging market equities fell 11.4% in Q2 and 17.6% year-to-date. Asian emerging markets were the best performing region during the quarter as Chinese equities posted modest gains, while Latin American emerging markets struggled.

US equity factor and sector returns

Large-caps and value stocks outperform

- Large-caps held up slightly better than small-caps during Q2 and year-to-date. For the quarter and year-to-date periods, value outperformed growth, particularly within large-caps.
- The value, minimum volatility, and size factors outperformed during Q2, while the momentum and quality factors generally lagged. The value and minimum volatility factors have performed the best so far in 2022.
- The consumer staples, utilities and energy sectors held up the best during Q2, while consumer discretionary and technology struggled. Energy is the only sector that remains positive year-to-date.

Source: Bloomberg; as of 6/30/22

Source: Datastream; as of 6/30/22

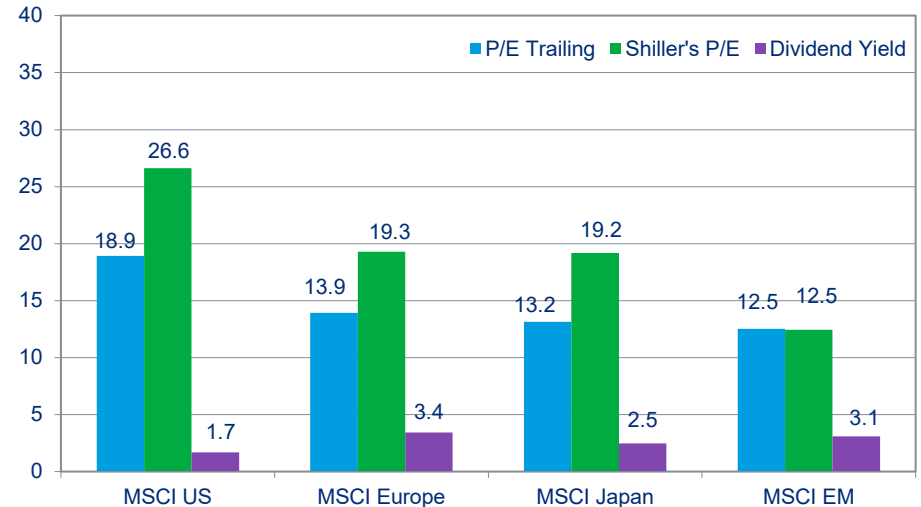

Source: MSCI; as of 6/30/22

Equity fundamentals

Valuations improved during the equity drawdown

- Valuations improved during the quarter as prices declined. The trailing P/E ratio on the MSCI US Index fell from 23.1 to 18.9¹. However, we estimate that the equity risk premium over long-term Treasuries fell from 2.7% to 2.4%² as the increase in yields outweighed improving valuations.
- International developed stocks remain more reasonably valued than US stocks, although the Russia-Ukraine conflict and its impact on energy and other commodity prices presents risks, particularly for Europe.
- Emerging market valuations remain more attractive than developed markets. Monetary policy remains highly accommodative in China, and reduced COVID restrictions provided a boost to activity in Q2.

Interest rates and fixed income

Rising rates and spreads weigh on fixed income returns

- The Bloomberg Aggregate declined 4.7% during the quarter. Treasuries declined 3.8%, but outperformed corporate bonds, which declined 7.3%. The yield curve shifted higher and flattened, with one-year yields rising 117 bps, while 30-year yields rose by 70 bps¹.
- Credit spreads on investment-grade corporate bonds rose an average of 40 bps during the quarter to 1.6%, which is roughly 45 bps above the long-term median level².
- High yield bonds declined 9.8% during the quarter, as credit spreads rose 244 bps to 5.7%. High yield spreads are now 107 bps above the long-term median level of 4.6%². Local currency EMD declined 8.6% during Q2.

Monetary policy

Central banks accelerate tightening plans

- The Fed raised its target rate 75 basis points in its June meeting amid persistently high inflation. This followed a 25 basis point hike in March and a 50 basis point hike in May. Market pricing suggests another 200 basis points of rate hikes during the second half of 2022.
- US inflation breakeven rates fell during the quarter, with 10-year inflation breakeven rates falling from 2.8% to 2.3%, slightly below the Fed's target of 2% PCE (roughly 2.5% CPI)¹.
- Overseas, the European Central Bank pre-announced a 25 basis point July rate hike. The Bank of England announced its fifth consecutive 25 basis point rate hike in June. Monetary policy conditions in China and Japan remained loose.

Alternative investment performance

Commodities and infrastructure outperform broader market

- REITs fell roughly 17% during Q2, in line with the declines in broader equity markets. Infrastructure stocks held up relatively well both in Q2 and 2022 as a whole, down 4% year-to-date.
- Commodities, natural resource stocks and MLPs declined during Q2 on fears that a potential recession could cause a slowdown in demand. However, returns for these assets remain strong year-to-date as supply concerns drove large gains early in the year.
- The HFRI FOF Composite Index declined 3.6% in Q2, leaving it down 6.3% year-to-date¹. Macro strategies have outperformed in 2022, while equity hedge and event-driven strategies have lagged.
- Global private equity outperformed global developed stocks over the most recent trailing periods².

Definitions

- Accrued** – Usually associated with interest or income, as in accrued interest; interest owed by the issuer but not yet paid.
- Allocation Effect** – In attribution analysis, this examines the gain or loss achieved from over or under weighting a manager versus its targeted allocation.
- Alpha** – Value that is added by the manager, or the non-systematic return; the excess portfolio return compared to the risk-adjusted benchmark. A positive alpha implies the manager has added value to the return over that of the market.
- Alpha-Jensen** – A version of alpha that utilizes risk-adjusted manager returns in its calculation.
- Attribution Analysis** – A tool to separate and examine the different sources of gain or loss from an overall investment policy and targeted asset allocation.
- Batting Average** – Measure of a fund or manager's ability to beat the market consistently. It is calculated by dividing the number of quarters in which the fund or manager outperformed its benchmark by the number of quarters in the analysis.
- Best Quarter** – The largest single quarterly return which occurred during the specified time period.
- Beta** – Measures the systematic risk, or the return that is attributable to market movements. A beta equal to one indicates a risk level equivalent to the market. Higher betas are associated with higher risk levels.
- Consumer Discretionary** – Sector classification of companies that produce goods that are not necessities, like automobiles, high-end clothing, hotels, and restaurants.
- Consumer Staples** – Sector classification of companies that produce necessities like food/beverage and household products.
- Correlation Coefficient** – Statistical measure of the degree to which the movements of two variables are related. A correlation of 1.0 indicates a perfect positive correlation; 0.0 indicates a random relationship; -1.0 indicates perfect negative correlation.
- Credit Risk** – A measure of the default risk on amounts due from policyholder or creditors.
- Current Yield** – A bond's coupon rate divided by the bond's current price.
- Dividend Yield** – The current dividend per share of a stock divided by its current price per share.
- Dollar/Money Weighted Rate of Return** – Measure of portfolio returns that includes the impact from cash flows.
- Down Market** – A quarter in which the market return is negative.
- Downside Deviation** – Standard deviation of negative returns only.
- Duration** – A measure of a bond's price volatility relative to a change in the general level of interest rates, measured in years. In general, bonds with longer durations have greater sensitivity to interest rates and vice-versa.
- Earnings Per Share (EPS)** – The portion of a company's profit allocated to each outstanding share of common stock.
- Earnings Per Share Growth Rate** – The rate at which the earnings per share grows over various time periods.
- Energy** – Sector classification of companies that relate to producing or supplying energy.
- Excess Return over Market/Risk** – Annualized excess return achieved by the manager divided by annualized standard deviation.
- Financials** – Sector classification of companies that provide banking, investment, and real estate services to commercial and retail customers.
- Health Care** – Sector classification of companies that provide health related services or products.
- Information Ratio** – Measures the consistency of out-performance. Excess return divided by Standard deviation of excess return.
- Information Technology** – Sector classification of companies that are involved in the development, installation, and implementation of computer systems and applications.
- Industrials** – Sector classification of companies that manufacture or distribute goods.
- Manager Effect** – In attribution analysis, this examines the difference between a manager's returns versus his or her respective benchmark.

Definitions

- Materials** – Sector classification of companies that are involved in the discovery, development, and processing of raw materials.
- Maturity** – Date when the principal or stated value of a fixed income security becomes due and payable in full to the bondholder.
- Policy Allocation** – Targeted allocation across various asset classes and/or managers.
- Price to Book Ratio (P/B)** – The current price of a stock divided by its book value per share.
- Price to Earnings Ratio (P/E)** – The current price of a stock divided by its earnings per share.
- Quality Rating** – Bond issuer's credit quality, or its ability to meet future contractual obligations. (Moody's and S&P's)
- R-Squared** – Measure of how closely related are the variance of a manager's returns to the variance of the benchmark's returns.
- Range** – The difference between the Best Quarter and the Worst Quarter returns.
- Return on Equity (ROE)** – Equity (net worth) at the beginning of an accounting period divided into net income for the period.
- Return/Risk Comparison** – Analysis that exhibits the rate of return in relation to the volatility of those returns as measured by the annualized standard deviation of quarterly returns.
- Risk Free** – The equivalent of an investment with little to no risk of market loss, typically defined as short term Treasury bills.
- Sharpe Ratio** – This measures excess return per unit of risk. A higher ratio means the manager is achieving higher return for the risk.
- Sortino Ratio** – Similar to Sharpe Ratio, this measures excess return per unit of downside risk.
- Standard Deviation** – A statistical measure of portfolio risk, it measures the volatility of a fund's returns compared to the average return of the fund. It reflects the average deviation of the observations from their sample mean.
- Telecommunication Service** – Sector classification of companies that provide communication technology related services or products.
- Time-Weighted Rate of Return** – Minimizes the impact of cash flows on rate of return calculations.
- Total Return** – For bonds, the sum of interest and principal payments as well as any reinvestment income received over a holding or measurement period, plus any capital gain or loss if the bond is sold at the end of the period.
- Tracking Error** – How closely a fund or manager's returns track the returns of a benchmark.; the annualized standard deviation of the differences between the fund or manager's return and the benchmark's return.
- Transportation** – Sector classification of companies that provide transportation related services or products.
- Treynor Ratio** – Risk is measured using Beta, which is an index dependent measure; relates the difference between the fund return and the risk-free rate to the fund beta for a given time period.
- Universe** – A broadly defined group of investment managers. For example, a group of equity investment managers.
- Up Market** – A quarter in which the market return is positive.
- Upside Deviation** – the standard deviation of positive returns only.
- Upside/Downside** – A graphical representation of up market and down market returns, measured as percentages versus benchmark.
- Utilities** – Sector classification of companies that own or operate facilities used in the generation, transmission, or distribution of electric energy.
- Worst Four Quarters** – Smallest return experienced over any four consecutive quarters, may not correspond with calendar years.
- Worst Quarter** – The worst single quarterly return which occurred during the specified time period.
- Yield** – The return to a bondholder who holds a bond until it matures.
- Yield to Maturity** – Internal rate of return on a bond bought at the current price and held to maturity. This assumes that coupon income is reinvested at the yield to maturity.

Disclosures

DATA SOURCES: The information found in this document was derived from one or more of the following sources: InvestorForce, Morningstar, custodial account statements, money managers.

CONFLICTS OF INTEREST: To review information about certain potential conflicts of interest that may exist between GYL Financial Synergies, LLC and our clients, we refer you to GYL Financial Synergies, LLC's Form ADV, Part 2A ("Disclosure Document").

DISCLOSURE DOCUMENT: GYL Financial Synergies, LLC makes available to all clients, at no charge, a copy of its Disclosure Document (Part 2A of Form ADV). To receive a copy of this form, please contact us at (860) 206-7400.

STATEMENT OF OPINION: This and/or the accompanying information was prepared by or obtained from sources GYL Financial Synergies, LLC believes to be reliable but does not guarantee its accuracy. The report herein is not a complete analysis of every material fact in respect to any company, industry, or security. Any market prices are only indications of market values and are subject to change. The material has been prepared or is distributed solely for information purposes and is not a solicitation or an offer to buy any security or instrument or to participate in any trading strategy. Additional information is available upon request.

REPORTS: This report is not the official record of your account. However, it has been prepared to assist you with your investment planning and is for information purposes only. Your custodial statement is the official record of your account. Therefore, if there are any discrepancies between this report and your custodial statement, you should rely on the custodial statement. Cost data and acquisition dates provided by you are not verified by GYL Financial Synergies, LLC. Transactions requiring tax consideration should be reviewed carefully with your accountant or tax advisor. Unless otherwise indicated, market prices/values are the most recent closing prices available at the time of this report, and are subject to change. Prices may not reflect the value at which securities could be sold. Past performance does not guarantee future results. This report may include assets that you currently hold away from our firm; these assets may not be covered by SIPC. If included, information on assets held away from your primary custodian was provided by you or a third party; while we believe this information to be reliable, its accuracy and completeness are not guaranteed.

PAST PERFORMANCE: Except where specifically indicated that the performance is presented gross of fees, performance has been shown net of all management and advisory fees that would be charged by GYL Financial Synergies LLC. Where gross of fee performance presented for the client's portfolio managed by a third party manager, the client's return will be further reduced by the advisory and other expenses incurred in the management of the account by such third party manager. Such fees are in addition to any fees charged by GYL Financial Synergies and will vary depending on the third party manager. The investment advisory fees charged by GYL Financial Synergies LLC are described in Part 2A of Form ADV. Past performance is not a guarantee of future results.

INDEXES: The indices included in this report are presented to provide you with an understanding of their historic long-term performance and are not presented to illustrate the performance of any security. Investors cannot directly purchase any index.

Disclosures

ASSET CLASS SUITABILITY: Stocks offer long-term growth potential but may fluctuate more and provide less current income than other investments. The prices of small companies are typically more volatile than the stocks of larger companies. Investing in foreign securities presents certain risks not associated with domestic investments such as currency fluctuation, political and economic instability, and different accounting standards. This may result in greater share price volatility. There are special risks associated with an investment in real estate, including credit risk, interest rate fluctuations and the impact of varied economic conditions.

The yields and market value of fixed income investments will fluctuate so that your investment, if sold, may be worth more or less than the original cost. Bond prices fluctuate inversely to changes in interest rates. Therefore a rise in interest rates can result in the decline of the value of your investment. High yield bonds, commonly known as junk bonds, are subject to greater risk of loss of principal and interest, including default risk, than higher rated bonds. The prices of these bonds may be volatile.

Alternative investments are complex investment vehicles which generally have high costs and substantial risks. The high expenses often associated with these investments must be offset by trading profits and other income. They tend to be more volatile than other types of investments and present an increased risk of investment loss. There may also be a lack of transparency as to the underlying assets. Alternative investments are subject to fewer regulatory requirements than mutual funds and other registered investment company products and thus may offer investors fewer legal protections than they would have with more traditional investments. Additionally, there may be no secondary market for alternative investment interests and transferability may be limited or even prohibited. Other risks may apply as well, depending on the specific investment product.
